MISSOURI LAND
RECLAMATION COMMISSION

Description of Site Prior to Permitting

Original permitted area (10 acres) was a low-forested hillside and a portion of a relatively flat cropland area.

Description of the area covered under this permit expansion (55 additional acres) is as follows:

From the existing pit area to the south is a gently sloping hillside with an approximate slope of 6%. This area was once cropland and is now covered with grasses and weeds of various species. The hill crests approximately 500 feet from the south rim of the current excavation.

From the west rim of the current pit to the west is an irregular strip of land approximately 250 feet wide, north to south, and approximately 1600 long, east to west. This area is bounded by Sand Creek to the north, a forested area of deciduous trees of various species to the south, County Road 729 to the west and the current stockpile area to the east. This area was once cropland and is now supporting vegetation such as volunteer wheat, grasses, and weeds of various species. This area is relatively flat to level, east to west and gently sloping down toward Sand Creek at an approximate 4% grade.

From the north rim of the current pit area toward the north is a strip of land approximately 850 feet wide, east to west, and approximately 1600 feet long, north to south. This area is a hillside with an approximate grade of 5%. This area is presently utilized as cropland. Sand Creek and deciduous trees of various species bound this area on the south side. The east, north, and west boundaries of this area is forest composed of deciduous trees of various species.

Soil types in the expanded permit area, per the "Lincoln County Soil Survey", 1984 edition, are Haymond silt loam found along flood plains and small tributaries, and Hatton and Keswick silt loams found on side slopes and ridge tops.

The nearest building to the permit area is approximately 500 feet away. This building is the property of Richard Green, the permit area landowner.

ESTIMATED ACRES:

22 DM 6-18-99
23 Acres

43 Acres

EXHIBIT B

POST MINING PROPERTY DESCRIPTION

Upon completion of mining operations, the total pit area should be approximately 40 acres and tops of the highwalls to the pit floor will vary in depth from 35 to 90 feet deep. The pits, approximately 20 acres each will lie on both the north and south sides of Sand Creek, which bisects the lease property. Since the pits will be below the elevation of the bed of Sand Creek, the most appropriate post mining use of the pit areas is to allow the pits to fill with water and become recreational lakes.

The rim of the pit areas will be graded such that a 3:1 dirt slope can be maintained from the lease boundary to the rim of the pits. In the event that the pit areas do not advance close to the lease boundaries (do to limited sales, etc.), a 3:1 slope will be maintained from the rim to the existing ground elevation.

All spoil disposal areas will be covered with 1 foot of topsoil to establish vegetative cover and graded such that a 3:1 slope to existing elevations can be easily maintained. Spoil disposal areas will be limited due to the landowners (Richard Green) consumption of fill material to improve his airport runway which is located to the south of the permit area. The amount of fill required to perform this work exceeds the amount of spoil disposal required to mine the long term mine plan area.

All slopes will be graded and seeded immediately upon the cessation of mining operations.

By my signature, I attest to the following:

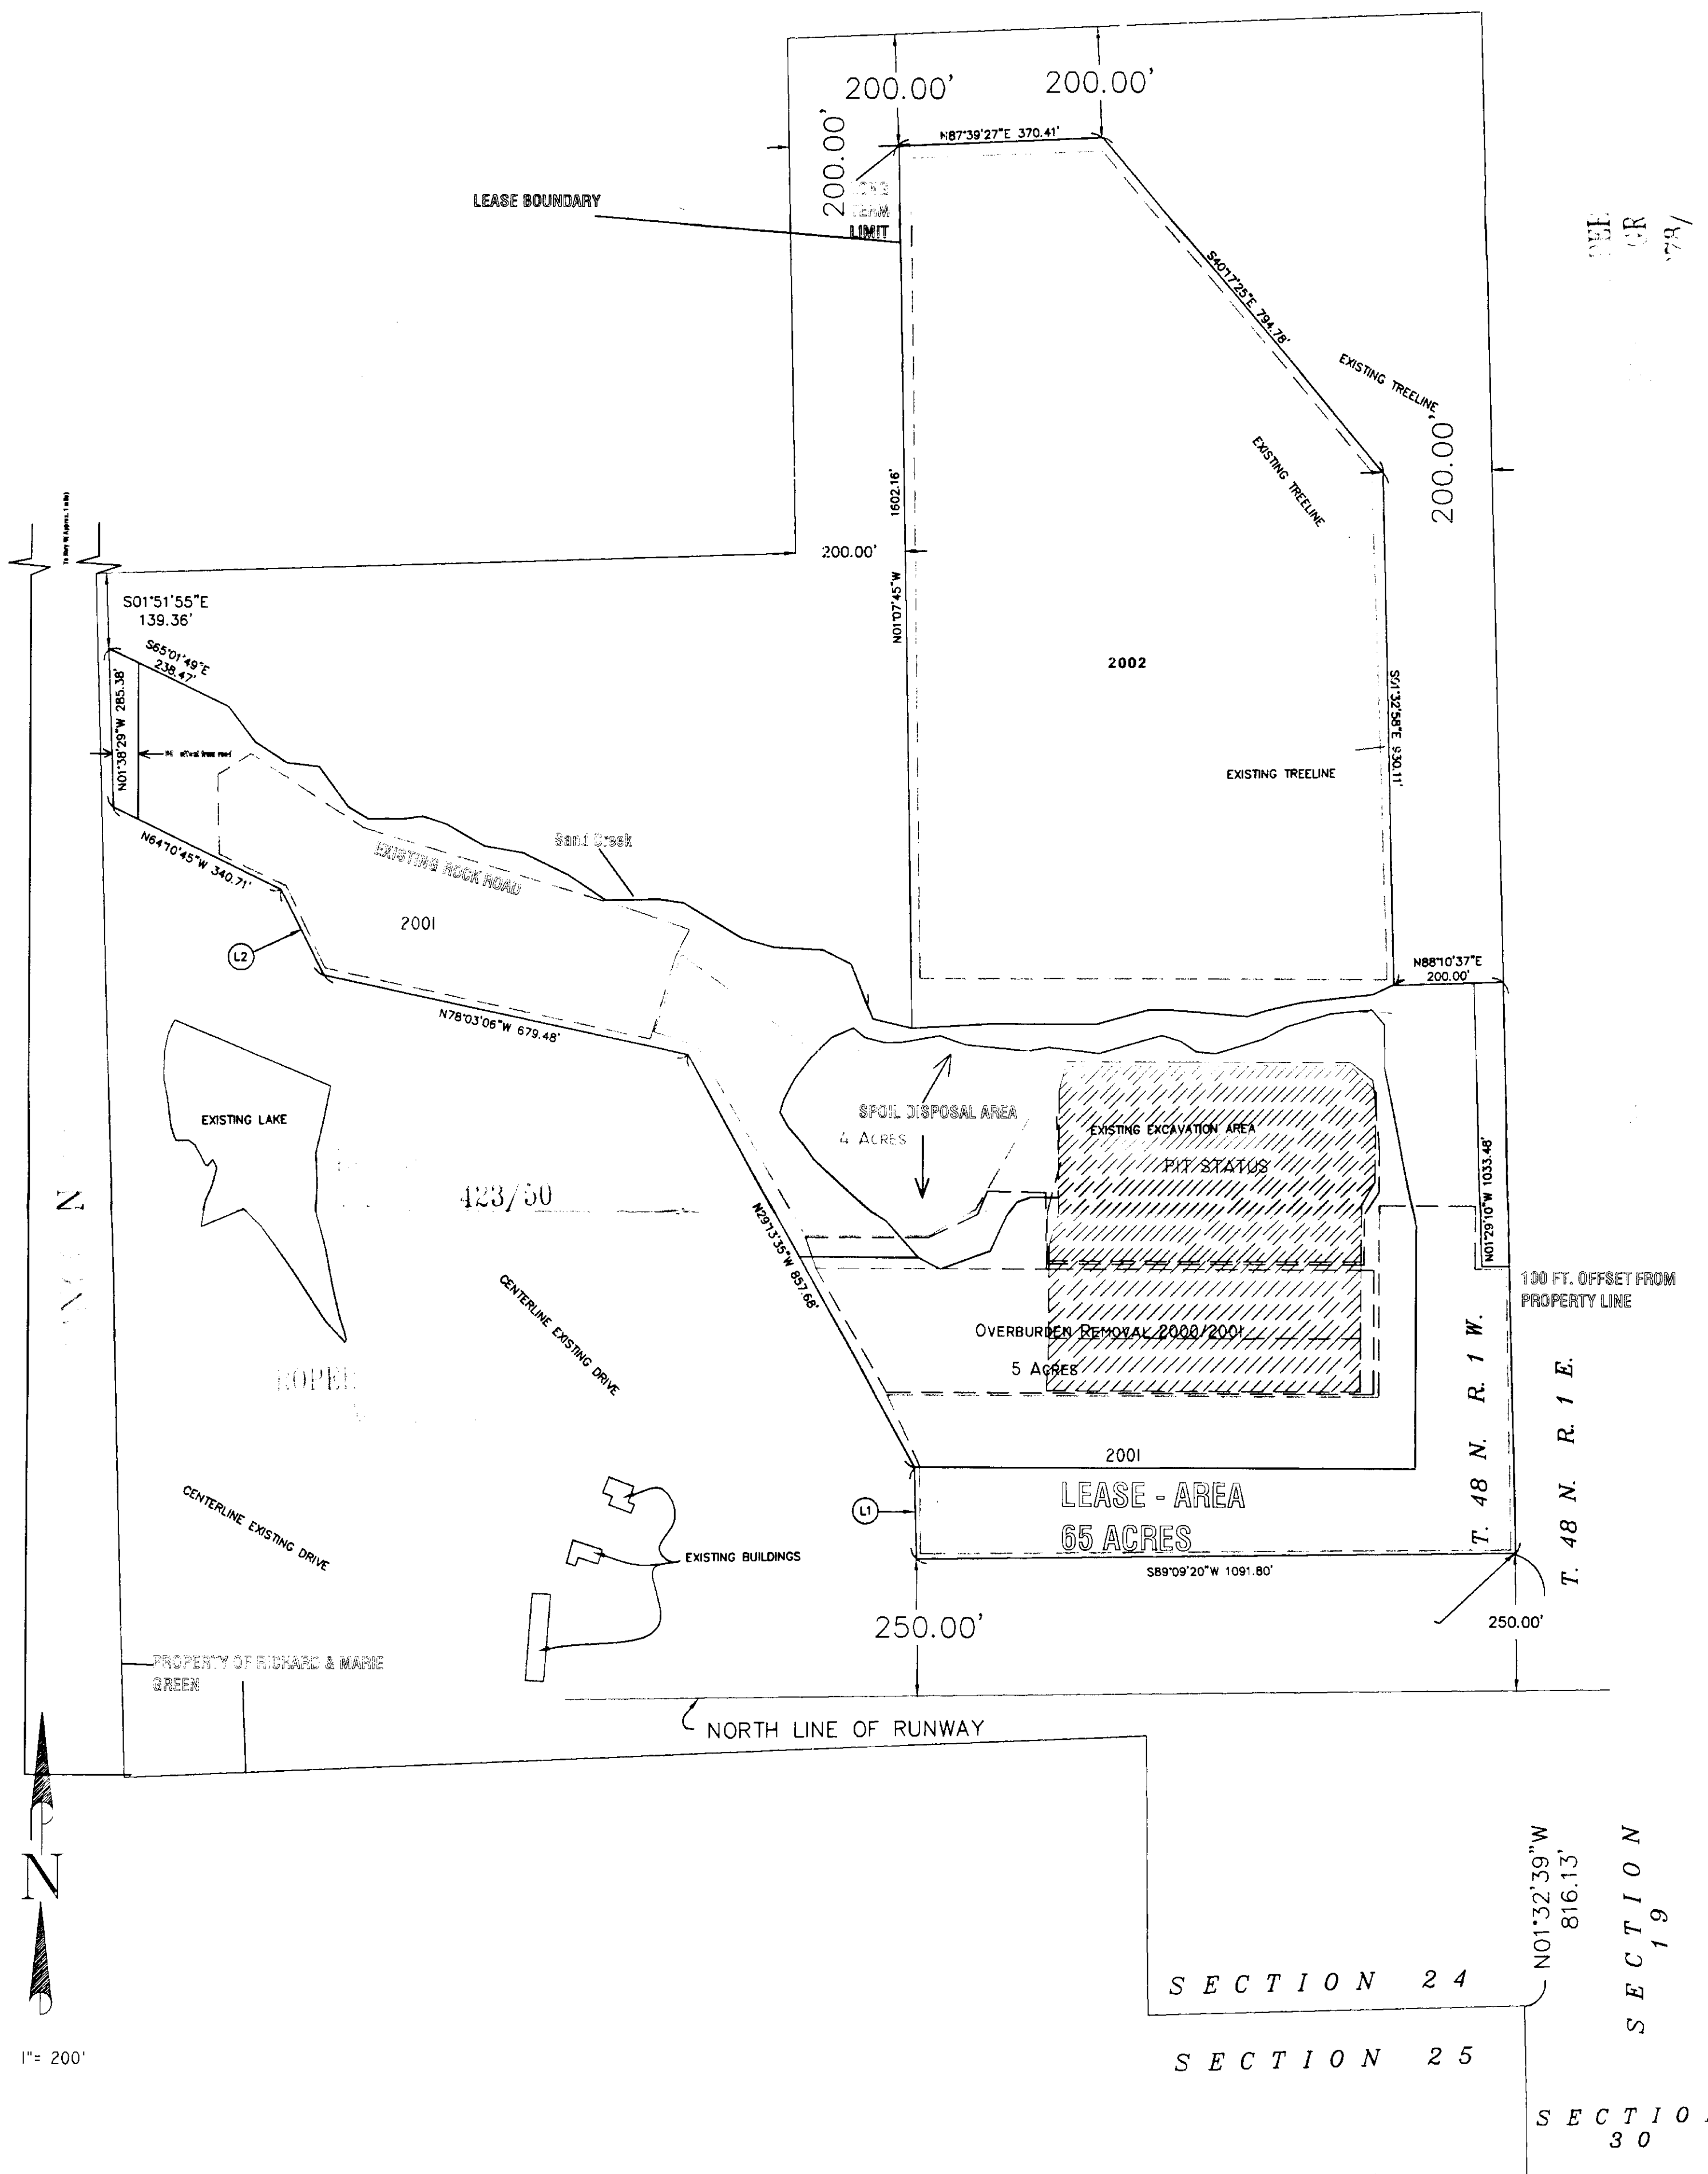

1. All statements made on this Mine Plan Form are correct, complete and true, to the best of my knowledge.
2. I or the company I am authorized to represent intend(s) to mine in accordance with this Mine Plan Form, and in accordance with the Missouri Land Reclamation Act, Sections 444.760 through 444.790, RSMo 2001, and all rules, regulations, orders, decisions and permits of the Missouri Land Reclamation Commission pertaining to my company's surface mining operations.
3. I have obtained the approval of all landowner's (for all lease agreements made after August 28, 1990 on leased land) for all proposed post-mining land uses.
4. I have obtained the approval of all landowner's, (for all lease agreements made after August 28, 1990 on leased land) for all proposed seed mixtures.
5. I have a valid agreement with all landowners which gives me the right to grant access to the Director of the Missouri Land Reclamation Commission and authorized representatives, and I grant such access, and further where I have no such right, I have attached signed affidavits from the landowners, granting such access.
